1. ALTERNATE SOURCE OF ENERGY & ENERGY CONSERVATION MEASURE.

Conservation of Energy can be done by using power more efficiently. Renewable energy such as sunlight, wind and water should be used. Energy conservation measures are used everywhere to reduce consumption. This had a positive effect on the quality of the environment. Energy conservation plays an important role in saving non-renewable energy resources. Furthermore, non-renewable energy sources take many centuries to regenerate. Moreover, humans consume energy at a faster rate than it can be produced. Therefore, energy conservation would lead to the preservation of these precious non-renewable sources of energy.

In the view of above, the college is attempting to increase the use of renewable energy.

Our Institution has the following Alternative energy conservation facilities:

- ❖ Solar Panel
- ❖ LED Bulbs
- ❖ E Bike Charger
